

Dräger original accessories and consumables tested for compatibility

Dräger accessories & consumables are designed to be used with Dräger medical devices. In order to improve consistent operational performance and to reduce compatibility risk thus ensuring patient safety, Dräger not only tests the accessories which are developed to be used with the device, but also its consumable portfolio for compatibility with its medical devices.

A Declaration of Compatibility certifies that a certain product has been tested in combination with the corresponding device. The use of the device and the corresponding accessory is described in the Instruction for Use of both the device and the accessory.

That means for the operator of medical products – who has a particular focus on quality issues – that the correct functioning of original Dräger accessories &

consumables has been tested for the respective device.

On this page you will find a selection of released accessories which have been tested with Dräger medical devices according to IEC 60601-2-13 and EN ISO 8835*.

Only use Dräger approved accessories and consumables. Otherwise the correct functioning and performance might be compromised.

DRÄGER QUALITY COMPONENTS

*Please kindly note that the products listed on this page are only a selection. Additional products you will also find in the accessory list of the respective device. Products that are in the market for a long time and have been approved for use with the device before existence of IEC 60601-2-13 and EN ISO 8835 may not have a specific documented declaration of compatibility as they are part of the device specific accessory list. These accessories have already been evaluated during the CE Conformity Assessment procedure.
